-- The inventors are also aware that the amino acid sequences of the C terminal parts of the histone H1 subtypes of human and as far as they are known of consensus sequences, i.e., bovine and other mammals are very similar. They are composed of homologous sequence patterns (boxes) of the type KPAAA (SEQ ID NO. 27), KPAAA (SEQ ID NO. 28), KAKKA (SEQ ID NO. 29) or boxes derived from them by exchange of one or two amino acids. --

On page 6, please replace the paragraph beginning on line 14 with the following rewritten paragraph:

-- From the peptides 1₁ til 1₇ smaller peptides may be selected which contain at least eight amino acids and at least one consensus sequence (depicted as boxes of five amino acids) whereby the C terminal is always AXKKK (SEQ ID NO. 32) (X=A or P). --

On page 11, please replace the paragraph beginning on line 29 with the following rewritten paragraph:

-- The invention also comprises the use of the peptides of the invention in the therapy of immunological disorders, in particular of SLE, rheumatoid arthritis and sclerodermia. In the therapeutical methods of the invention a pharmaceutical composition which comprises a therapeutically effective amount of at least one peptide with an amino acid sequence as disclosed herein in SEQ ID NO. 1, 2, ~~or~~ 3, 4, 5, 6, 7, 8, or 9 is administered to a patient. A therapeutically effective amount of a peptide is an amount which upon single or repeated administration to a patient does alleviate an inflammation or reduce any symptom of the aforementioned disorders. The pharmaceutical compositions of a first embodiment of the invention comprise at least one lyophilised peptide of SEQ ID NO. 1 to ~~3~~ 9 in dry form, which can be readily dissolved, *e.g.*, in phosphate-buffered saline (PBS), aqua ad injectabilia, Ringer's solution or the like, prior to use. The pharmaceutical compositions may also comprise pharmaceutically acceptable carriers. The pharmaceutical preparations are preferably administered by parenteral injection, renal perfusion, or by oral application. The pharmaceutical compositions of the invention are specialised embodiments adapted to various oral or topical applications to a patient. The skilled in the art readily prepares the suitable compositions. The pharmaceutically effective amount of a single dose of at least one peptide of the invention depends on the age and size of the patient, on the route of administration, and the severeness of the symptoms. Without any restriction, a therapeutically effective amount of a peptide may range from 0.1 to several hundred milligrams. In an advantageous embodiment, the pharmaceutical composition comprises the peptides of SEQ ID No. 1, 4, 5, 6, 7, 8 or 9 and SEQ ID NO. 2 in equimolar amounts.
